To whom it may concern, I would like to express my outrage about NAB's petition 04-160 attempting to eliminate satellite broadcasters from broadcasting local traffic and weather. I purchased my sat. radio because I was so disgusted with FM radio as a whole. This is a safety issue also. Just to find out the local traffic or weather on terrestrial radio it takes forever to get through the talk, commercials and so called music. I am paying a fee to receive this service from XM by my own choice. If conventional radio broadcasters would get their heads out of their butts about the sorry state of their product they would not even be in this position trying to defend themselves.

Sincerely,

Andrew J. Heidner
